SPECIFICITY
The CD23 antigen is a transmembrane glycoprotein with a molecular weight of 45 kDa, spatially associated with the major histocompatibility complex (MHC) class II. The CD23 molecule, also named FcεRII, is the low affinity receptor for IgE.

The CD23 antigen is primarily expressed on B lymphocytes and monocytes. It is also present on a large variety of other cells such as T lymphocytes, eosinophils, platelets, Langerhans cells, a subset of thymic epithelial cells and neutrophils.

On B lymphocytes, CD23 expression is up-regulated upon activation and ultimately lost upon differentiation towards secreting-plasmocytes. A soluble form of CD23 (sCD23) exists and may be involved (like CD23) in the regulation of IgE synthesis and inflammatory phenomenon (1, 2).

The 9P25 monoclonal antibody was assigned to the CD23 cluster of differentiation at the 6th International Workshop on Human Leucocyte Differentiation Antigens in 1996 (Kobe-Japan) (3).

REAGENT
IOTest CD23-PE Conjugated Antibody
PN A33099 – Liquid 2 mL – 20 µL / test* – Clone 9P25

Clone 9P25
Isotype IgG1 (kappa), mouse
Immunogen EBV-transformed lymphoblastoid cell line
Hybridoma NS1 x Balb/c
Source Ascites fluid
Purification Ion exchange or affinity chromatography
Conjugation R-phycoerythrin (PE) is conjugated at 0.5 – 1.5 moles of PE per mole of Ig.
Excitation wavelength: 488 nm
Maximum emission wavelength: 575 nm
Main emission color: Orange-red.

REAGENT CONTENTS
This reagent is provided in phosphate-buffered saline containing 0.1% sodium azide (NaN₃) as preservative, and 2 mg/mL bovine serum albumin (BSA).

STATEMENT OF WARNINGS
1. This reagent contains 0.1% sodium azide. Sodium azide under acid conditions yields hydrazoic acid, an extremely toxic compound. Azide compounds should be flushed with running water while being discarded. These precautions are recommended to avoid deposits in metal piping in which explosive conditions can develop. If skin or eye contact occurs, wash excessively with water.
2. Specimens, samples and all material coming in contact with them should be handled as if capable of transmitting infection and disposed of with proper precautions.
3. Never pipet by mouth and avoid contact of samples with skin and mucous membranes.
4. Do not use reagent beyond the expiration date on the vial label.
5. Minimize exposure of reagent to light during storage or incubation.
6. Avoid microbial contamination of reagent or erroneous results may occur.
7. Use good laboratory practices when handling this reagent.

STORAGE CONDITIONS AND STABILITY
This reagent is stable up to the expiration date printed on the vial label.

EVIDENCE OF DETERIORATION
Any change in the physical appearance of this PE-labeled reagent (clear, colorless to pink liquid) or any major variation in values obtained for control samples may indicate deterioration and the reagent should not be used.

REAGENT PREPARATION
No preparation is necessary. This reagent is used directly from the vial. Bring reagent to 18 – 25°C prior to use.
