Analyte Specific Reagent.
Analytical and performance characteristics are not established.

SPECIFICITY
CD44 cluster antigens are transmembrane glycoproteins, members of the hyaladherin family of hyaluronan-binding proteins (1). Multiple CD44 isoforms have been described, the predominant form being CD44S, a glycoprotein of 85 kDa. The expression and adhesive properties of CD44 molecules are described in refs. 2 and 3. CD44 is present on most cells or tissues, but not on platelets, hepatocytes, cardiac muscle, kidney tubular epithelium, testis and skin portions (4). The J.173 monoclonal antibody has been assigned to the CD44 cluster of differentiation at the 3rd International Workshop on Human Leucocyte Differentiation Antigens in Oxford, England, in 1986 (5). Its reactivity is described in refs. 6, 7 and 8.

REAGENT
IOTest CD44-FITC Conjugated Antibody
PN IM1219U – 2 mL Liquid – 20 µL / test*.
Clone J.173
Isotype IgG1, mouse
Immunogen LAZ 221 ALL
Hybridoma NS1x Balb/c
Source Ascites fluid
Purification ion exchange or affinity chromatography
Conjugation FITC (Fluorescein isothiocyanate) is conjugated at 4 – 7 moles of FITC per mole of Ig.
Fluorescence FITC (Green)
Excites at 468 – 509 nm
Emits at 504 – 541 nm

REAGENT CONTENTS
This reagent is provided in phosphate-buffered saline, with 0.1% sodium azide (NaN₃) as preservative, and 2.0 mg / mL bovine serum albumin (BSA).

STATEMENT OF WARNINGS
1. This reagent contains 0.1% sodium azide. Sodium azide under acid conditions yields hydrazoic acid, an extremely toxic compound. Azide compounds should be flushed with running water while being discarded. These precautions are recommended to avoid deposits in metal piping in which explosive conditions can develop. If skin or eye contact occurs, wash excessively with water.
2. Do not use antibody beyond the expiration date on the label.
3. Samples and all material coming in contact with them should be handled as if capable of transmitting infection and disposed of with proper precautions.
4. Never pipet by mouth and avoid contact of samples with skin and mucous membranes.
5. Minimize exposure of reagent to light during storage or incubation.
6. Avoid microbial contamination of reagents or incorrect results might occur.
7. Use good laboratory practices when handling this reagent.

STORAGE CONDITIONS AND STABILITY
This reagent is stable up to the expiration date when stored at 2 – 8°C. Do not freeze. Minimize exposure to light.

EVIDENCE OF DETERIORATION
Any change in the physical appearance of this FITC-labeled reagent (clear, colorless to yellowish-green liquid) or any major variation in values obtained for control samples may indicate deterioration and the reagent should not be used.

REAGENT PREPARATION
No preparation is necessary. This monoclonal antibody may be used directly from the vial. Bring reagent to 18 – 25°C prior to use.
