Analyte Specific Reagent.
Analytical and performance characteristics are not established.

SPECIFICITY
The CD43 molecule (also known as leukosialin, sialophorin, leucocyte sialophorin, leucocyte sialo-glycoprotein, gpL115) is a 95-135 kDa cell surface mucin-type glycoprotein. The molecule is heavily O-glycosylated and sialylated. This explains the molecular weight heterogeneity (1, 2). The CD43 antigen is expressed on platelets and on all white blood cells except non-activated B lymphocytes. It is also expressed on bone marrow precursor cells (1). The DFT1 monoclonal antibody reacts with an extracellular epitope of the CD43 antigen (3). It has been assigned to the CD43 cluster of differentiation at the 4th International Workshop on Human Leucocyte Differentiation Antigens in Vienna, Austria, in 1989 (2).

REAGENT
IOTest® CD43-FITC Conjugated Antibody
PN IM3264U – 2 mL Liquid – 20 µL / test*
Clone
DFT1
Isotype
IgG1, mouse
Immunogen
Myeloblastic cell line KG1
Hybridoma
Myeloma x Balb/c
Source
Ascites fluid
Purification
Ion exchange or affinity chromatography
Conjugation
FITC (Fluorescein isothiocyanate) is conjugated at 15 – 25 moles of FITC per mole of Ig.
Fluorescence
FITC (Green) Excites at 468 – 509 nm Emits at 504 – 541 nm

STATEMENT OF WARNINGS
1. This reagent contains 0.1% sodium azide. Sodium azide under acid conditions yields hydrazoic acid, an extremely toxic compound. Azide compounds should be flushed with running water while being discarded. These precautions are recommended to avoid deposits in metal piping in which explosive conditions can develop. If skin or eye contact occurs, wash excessively with water.
2. Do not use antibody beyond the expiration date on the label.
3. Samples and all material coming in contact with them should be handled as if capable of transmitting infection and disposed of with proper precautions.
4. Never pipet by mouth and avoid contact of samples with skin and mucous membranes
5. Minimize exposure of reagent to light during storage or incubation.
6. Avoid microbial contamination of reagents or incorrect results might occur.
7. Use good laboratory practices when handling this reagent.

STORAGE CONDITIONS AND STABILITY
This reagent is stable up to the expiration date when stored at 2 – 8°C. Do not freeze. Minimize exposure to light.

EVIDENCE OF DETERIORATION
Any change in the physical appearance of this FITC-labeled reagent (clear, colorless to yellowish-green liquid) or any major variation in values obtained for control samples may indicate deterioration and the reagent should not be used.

REAGENT PREPARATION
No preparation is necessary. This monoclonal antibody may be used directly from the vial. Bring reagent to 18 – 25°C prior to use.
